The following lessons will introduce basic SQL SELECT concepts and syntax using the public IRS dataset in BigQuery as an example datasource. Please skim the data source documentation below.

IRS Non-Profit Dataset overview

https://cloud.google.com/bigquery/public-data/irs-990

Form 990 is used by the United States Internal Revenue Service to gather financial information about nonprofit/exempt organizations. This BigQuery dataset can be used to perform research and analysis of organizations that have electronically filed Forms 990, 990-EZ and 990-PF.

Key fields

- ein = employer identification number
- name = name of non-profit charity
